Standard errors in parentheses. Each model's dependent variable is the number of eligible final rules with or without NPRMs with a significance score of at least T (defined in the column labels), promulgated by an agency within a Congress. Models include agency-level random effects and agency-clustered S.E.s. One-tailed test: * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$

Standard errors in parentheses. Each model's dependent variable is the number of eligible final rules with NPRMs and a significance score of at least T (defined in the column labels), promulgated by an agency within a Congress. Models include agency-level random effects and agency-clustered S.E.s. One-tailed test: * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$
